SERVICES PROVIDED

- ▶ Traffic Data Collection
- ▶ Driver Surveys
- ▶ Data Analysis

LTEC Team Involved

- ▶ J. Anthony Luke, P.E.
- ▶ Joseph T. Roviario, AICP
- ▶ George Eljabbour

This project consisted of continuing services for Orange County to provide studies of transportation impact fee calculations for existing land uses. LTEC completed extensive traffic counts and user surveys for a variety of land uses within Orange County, including stores, hotels, and restaurants. Data was collected to identify trip generation, trip lengths, and trip purposes for the site users.

The data was collected, reduced, and applied, using Orange County's adopted Transportation Impact Fee formulas, to calculate specific impact fees for each use studied.

LTEC provided the data, calculation documentation, and recommendations in reports to County staff. The information was utilized to review actual impact fees applicable to those developments that had submitted Alternative Transportation Impact Fee Calculations prior to build-out.

LTEC completed this service for years 2000 to the present.
